

02 / ITEM MASTER

Item Master Knowledge

The central reference layer that identifies every material

Purpose for the AI Assistant

Lets the assistant resolve any item name, code, specification or category to a single canonical identity, and understand the classification hierarchy used across all other datasets.

1. Structure

File	Item_Database.xlsx
Rows / unique codes	26,695 / 26,695 (one row per item)
Columns	ItemCode, Item, Specification, Group Name, Material Standard, Item Sub Group, Unit
Item Code pattern	-, e.g. 555-127, 19981-60. Suffix denotes an internal classification/unit family.

2. Why the Item Code matters

The Item Code is the primary key of the whole knowledge base. Item names are not unique (many 'Electrode 10#' variants exist, separated only by specification), so the assistant must anchor on the code. Stock, Issuance, Purchase, Requisition and AB_Items all reference it.

Disambiguation rule

If a user gives a name with no code and several items match, the assistant narrows by Specification, Material Standard and Category before answering – or asks one clarifying question if still ambiguous.

3. Classification hierarchy

Item → Specification → Group Name → Material Standard → Item Sub Group (category) → Unit. The Sub Group is the category label reused in stock/issuance analytics.

Largest sub-groups (by item count)

Item Sub Group	Items
Hardware & Fittings	4,882
Workshop & General Items	4,389
Cutting Tools	3,147
Electrical Items	3,121
Bars & Structure Material	1,734
Power, Hand Tools & Accessories	1,537

Item Sub Group	Items
Machine Accessories Mechanical	1,435
Bearings	1,134
Plate Material	1,035
Measuring Instruments	712

4. Relationships the assistant can traverse

- Item Code → Stock: current availability & valuation by branch.
- Item Code → Issuance: consumption history, departments, machines, cost.
- Item Code → Purchase: suppliers, prices, lead time, PO history.
- Item Code → Requisition: open internal demand and pending quantity.
- Item Code → AB_Items: reorder level, safety stock, forecast, criticality.
