

03 / STORES

Stores & Inventory Knowledge

Availability, valuation, hold, reorder and critical stock

Purpose for the AI Assistant

Enables the assistant to report what physically exists, what is usable, what it is worth, and where stock is becoming critical – per branch and group-wide.

1. Source & structure

Files (one per branch)	Untitled__14__.xls (Qadbros); Untitled__15__.xls (Qadcast); Untitled__16__.xls (Qadri Brothers Unit-II); Untitled__17__.xls (Qadri Engineering)
Total rows	6,070
Columns	ItemCode, Item, Category, Reorder Level, Hold Qty, StockQty, Stock Qty Amou, Available Qty, Available Amoun, Weight(Kgs), Branch

2. Core inventory concepts

Field	Meaning	AI interpretation
StockQty	Physical quantity on hand	Total present, incl. blocked
Hold Qty	Blocked / reserved quantity	Not usable now
Available Qty	Usable quantity	StockQty – Hold; the number that matters for issue
Available Amoun	Value of usable stock (PKR)	Authoritative inventory-value figure
Stock Qty Amou	Value of total physical stock	Includes held value
Reorder Level	Minimum before replenish	If Available < Reorder → flag reorder

Valuation rule

For 'inventory value' questions the assistant sums **Available Amoun** (usable value). It does not recompute qty × price.

3. Current position (as of 2026-07-24)

Metric	Value
Available inventory value (group)	PKR 860,385,663
Total stock quantity	3,580,680
Total available quantity	3,571,442
Total hold quantity	31,272

Metric	Value
Items with a reorder level set	1,186

Stock rows by branch

Branch	Rows
Qadri Engineering (Pvt) Ltd.	1,812
Qadcast (Pvt) Ltd.	1,791
Qadbro Engineering (Pvt) Ltd.	1,704
Qadri Brothers (Pvt.) Ltd. (Unit-II)	763

4. Critical & reorder logic (with AB_Items)

Basic reorder = Available Qty below Reorder Level. Richer intelligence lives in AB_Items: **Critical** (43) and **Re-Order** (32) item lists, plus Safety Stock, Safety Days, Lead Time Days and Stock Health (a stock-days coverage ratio). Low Stock Health + long lead time = highest priority.

5. KPIs the assistant can produce

- Inventory value by branch / category.
- Count and value of items below reorder level.
- Hold ratio = Hold Qty / StockQty (blocked capital).
- Critical-item count and their combined pending demand.
- Coverage in days = Available Qty ÷ average monthly issuance.
