

06 / LOGISTICS

Logistics Knowledge

Export shipments, transportation, documentation and shifting

Purpose for the AI Assistant

Lets the assistant track outbound export shipments, internal shifting between branches, container/documentation status and freight performance.

1. Source & structure

File	Qadri-Group-Logistics-Master.xlsx
Shipment master rows	165
Key sheets	Dashboard, Database, Export Documentation Database, Shipment Master Database, Master Packing Database, Inbound & Outbound Shifting, Data Quality Checks
Key fields	Shipment Stage, Shipment Status, Delay Status, Customer, Country, POD, Incoterm/Shipping Term, Containers (20'/40', OT, FR, OOG, LCL, AIR), S/Agent, C/Agent, S/Line, CRO #, BL Status, ETD Karachi, Actual Arrival, Transit Time, Sailing Date, Transporter, Truck Status, Total Shipping Cost

2. Dashboard KPIs (from the workbook)

KPI	Value
Shipments Planned	134
On Water	0
Dispatched (Trucking)	186
In Packing	93

3. Export shipment lifecycle

Packing → Gate-Out → Sailing (vessel departs Karachi) → In Transit → Arrival at destination port (POD).

Documentation runs in parallel: Customs, Customer and Bank doc statuses plus BL (Bill of Lading) status roll up into a 'Docs Overall' state.

'Sailing' in logistics

Vessel departure event/date for an EXPORT shipment leaving Karachi (contrast with import 'on water').

Contrast with imports, where the vessel is inbound.

4. Containers & documentation

Container types	20'/40' Standard, Open Top (OT), Flat Rack (FR), Out-of-Gauge (OOG), plus LCL and AIR.
BL	Bill of Lading – carrier's receipt & title document.
GD	Goods Declaration – customs filing.
POD	Port of Discharge / destination port.
CRO	Container Release Order.
Incoterm	Delivery/risk terms (e.g. CFR, FOB) governing cost split.

5. Delay & performance logic

Logistics delay

Actual Arrival - ETA (logistics context). Transit Time is captured per shipment; comparing actual vs planned reveals route or carrier performance.

6. Logistics KPIs

- Shipments by stage (planned / on water / delivered / dispatched).
- Documentation completion rate (customs, customer, bank, BL).
- Average transit time by destination / shipping line.
- Freight cost per shipment / per kg.
- Internal shifting volume between branches (inbound & outbound).
